

Description of the audiovisual market

The data regarding national and international television services established and available in Spain has been updated in June 2017, based on information provided by CNMC (Comisión Nacional de los Mercados y la Competencia). The Observatory may have supplemented the data provided, in particular as regards ownership or distribution, and may have harmonized some of the information given (e.g. linguistic versions or genres). Data on regional television services and on on-demand services have been researched by the Observatory. Please note that: The list of local channels is not systematically updated. MAVISE only tracks the most significant on-demand services. They have been selected by the Observatory based on different sources.
